

**INSERM**

**Brain Development and Plasticity Group  
Ecole Normale Supérieure, Paris, France**

**POST-DOCTORAL POSITION  
IN DEVELOPMENTAL NEUROSCIENCES**

We are looking for a post-doctoral scientist to join our group investigating the development of the mammalian brain. Our lab focuses on understanding the molecular and cellular mechanisms controlling cell migration and axon guidance in the embryonic forebrain using mouse molecular genetics, ex-vivo manipulations and imaging techniques.

Our group is located in the center of Paris in the Biology Department of the Ecole Normale Supérieure, a multidisciplinary university that hosts high-profile laboratories and provides excellent technical facilities.

For more information, visit: <http://www.biologie.ens.fr/bmdbdp/> We are seeking highly motivated individuals with a strong interest in developmental biology or neuroscience. Previous experience in one of these fields is preferred, but not essential. Long-term funding (2 to 4 years) is available.

Applications including a CV with publication list and the names and coordinates of two references should be sent by email to Sonia Garel ([garel@biologie.ens.fr](mailto:garel@biologie.ens.fr)).
