

## **POST-DOCTORAL POSITIONS IN IPS CELL RESEARCH**

Postdoctoral fellow positions are available in the laboratory of Dr Eirini Papapetrou M.D., Ph.D., Assistant Professor, in the Hematology Division, University of Washington School of Medicine, Seattle, WA. The successful candidate will be joining a new research group focused on human induced pluripotent stem cell (iPSC) research. The lab focuses on translational research with human iPSCs in hematology, particularly in cell therapy applications and the generation of new disease models to study the genetics and pathogenesis of myelodysplastic syndromes. The work will span iPS cell generation, hematopoietic differentiation and genetic screens.

Highly motivated individuals with a strong interest in translational stem cell research and with the ability to multitask in a fast-paced lab are encouraged to apply. Applicants must be recent Ph.D. or M.D./Ph.D. graduates in cellular biology, molecular biology, genetics, developmental biology or related fields. Prior experience in culture of human pluripotent stem cells and/or primary hematopoietic cells is required. Background in at least one of the following: molecular biology, lentiviral vector construction and production, mouse work, as well as a track record of prior publications are strongly desired. Preference will be given to individuals with US citizenship or permanent residency, eligible for funding through a T32 post-doctoral training program.

Interested applicants should send a CV (no more than three pages) and a statement (one page) that describes past accomplishments, research interests and career goals, expected availability date and contact information of 3 referees in a single PDF file to Eirini Papapetrou ([eirinp@u.washington.edu](mailto:eirinp@u.washington.edu)).

The University of Washington is an affirmative action, equal opportunity employer.
